BENEFITS OF PVC

Our PVC products are not molded products as many people think of when they think of PVC products. Our products are made from cellular PVC and have the same look as wood products without the maintenance. Our products are manufactured in much the same way as wood products. We have our louver parts extruded in the same dimensions as traditional wooden louvers. We then cut the parts the same way as wood. The same holds true for our other PVC millwork. We cut and

route parts out of PVC sheets and boards from 3/8" thick to 1" thick depending on what we are building. We then assemble it in the same manner as wood. What you end up with is a product with the look and beauty of real wood without the maintenance involved with wood. Some people can't tell the difference in Cellular PVC products and wood products.

Not all PVC brands are the same. We use only the brands that have the following qualities.

- Cellular PVC will not rot.
- Cellular PVC will not absorb water.
- Cellular PVC is insect resistant
- Cellular PVC is highly resistant to salt, chemicals, pollutants and harsh sunlight
- Cellular PVC can contact directly with masonry
- Cellular PVC does not require painting. (But can be painted.)
- Cellular PVC can be sawn, routed, drilled, fastened or caulked in the same way wood can.
- Also, good core density, not a grainy look when routed.

We use Versatex for our sheets and trim boards.

Please visit their website at www.versatex.com for more information.

VERSATEX

PVC LOUVERS AND FOUNDATION VENTS

Our louvers and foundation vents can be custom built to almost any size or shape.

All of the PVC louver parts are extruded to the dimensions of wood. We manufacture them from cellular

PVC or almost any species of wood. We use stainless steel brads on the exposed trim and for the non-exposed areas we use galvanized staples and nails. Our PVC louvers, although they don't require it, can be painted with an acrylic latex paint to match the other trim on the house. PVC louvers will not rot, resists warping and is impervious to fungus and mildew giving you a virtually maintenance-free product. Closed cell foam structure will not absorb water. Highly resistant to salt, chemicals, pollutants and harsh sunlight.

NEW! Operable Foundation Vents

EXTERIOR & INTERIOR ACCESS DOORS

We build both exterior and interior access doors. Our exterior access doors are made 100% from PVC with no wood on them to rot over time. On our standard style the door is 3/4" thick, the jambs are 3/4"x3 1/2", the sill is 1 1/4"x3 1/2" and we use 180 style brickmould for the trim. We use solid brass hardware and stainless steel fasteners on all areas that are exposed to prevent rusting.

Our interior access doors are made from 1 3/8" thick MDF with 4 9/16" wood doorjambs with Q-Lon weather-stripping on all 4 sides. They are available as a standard flat panel door or it can be a raised panel design. We offer many options on our doors. You are not just limited to one style to choose from.

As with all of our products they can be custom built to fit your needs.

**Optional raised panel designs shown.*

PORCH COLUMNS AND ACCESSORIES

Our PVC Box Columns can be built in almost any size. They can be either square or octagonal. They can also be Plain, Fluted, Raised Panel, and Recessed Panel or have almost any design you

can think of carved in them or overlaid on them. The possibility of design is limited only by your imagination. All of our columns are made to your specifications. Whether it is a standard column or custom in every detail you will get the same quality of construction on each column. We also have available other accessories for your home such as porch valences, outdoor lampposts and mailbox posts to match your columns or decorative brackets to enhance the style of your home. Also, we make PVC handrail with specialty pickets. We manufacture many different PVC millwork products for exterior applications. Just let us know what you want and we can almost certainly manufacture it.

PVC MILLWORK

We also manufacture a lot of other exterior PVC products. Such as door surrounds, window and door pediments, gable pediments and dentil block sections to name a few. Most anything that can be made from wood

can be made from cellular PVC. It has the look of wood products without the maintenance.

Cellular PVC is weather resistant, moisture resistant, insect resistant, and rot resistant, does not require painting, and can be routed, cut, shaped, and milled. No matter what exterior millwork products you need, chances are we can produce what you want in PVC.
